

WHY ARE WE DIFFERENT?

A full range of integrated breast care services for both benign and malignant disease, including screening, surgery, chemotherapy, radiotherapy, reconstruction and aftercare, is offered in our clinic.

We offer the latest in breast surgery with mammotomy of breast lumps and sentinel lymph node biopsies for all our suitable patients, with facilities for lymphosyntigraphy and tissue and implant reconstruction after mastectomy.

We believe that the care of a breast patient requires a multi-disciplinary approach hence we have a team of surgeons, radiologists, oncologists, plastic surgeons, nurses, physiotherapists and other allied health professionals all working together under one roof. Through this collaboration, we are able to offer the highest professional standards of breast care that is specifically tailored to individual needs.

We are also actively involved in research with involvement in multi-centre trials both within Singapore and internationally with the aim of bringing higher quality care to our patients.

We also accept referrals for

- Chemotherapy
- Radiotherapy
- Plastic surgical procedures of the breast (breast augmentation or reduction, gynaecomastia surgery)
- Physiotherapy services for lymphoedema post breast surgery
