

# TTSH Earth Day Project Showcase

# Who is Semula Asia

---

Semula is an organization that transforms plastic waste into new opportunities through eco-friendly recycling, repurposing discarded materials and promoting sustainable waste management. Semula conveys hope by demonstrating that products made from recovered materials can match the quality of those made from virgin materials. The exhibition will showcase furniture and products created from locally collected and processed waste.

**Semula** 

# Why Should I Care?

---

Reducing waste and reliance on virgin materials is vital for environmental sustainability. Supporting circular processes decreases landfill waste and lowers the demand for new raw materials. This approach helps prevent waste accumulation and reduces the extraction of finite natural resources.

# What is Semula Asia doing?

Convert plastic waste and other waste locally into useable and functional items that fit into our daily lives.

Like for example converting plastic curtains into trays, bowls, cups and even clipboards. As well as converting other types of locally collected waste into furniture.

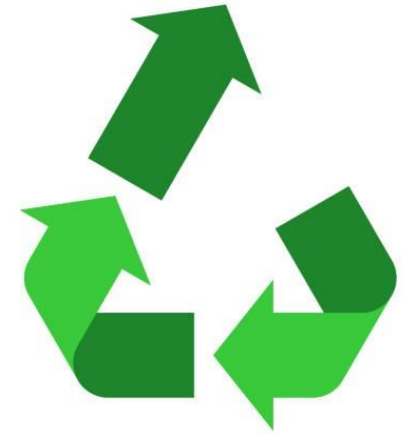

# How can You Help?

---

Every item reused or upcycled is one less piece of waste in our landfills.

Make Eco-Friendly choices and inspire others to do the same.

**UPCYCLE**

Thank You
