OT Services Help You To:

• Obtain skills to use remaining vision more efficiently for daily activities
• Use assistive technology for daily living
• Modify activities to be completed more easily
• Modify your home to increase safety and independence

You can be seen at our clinic at basement 1 or in your home.
What Is Occupational Therapy Low Vision Rehabilitation?

Low vision is a visual impairment that affects your daily activities, such as reading and writing. However, it still allows usable vision.

Occupational therapy (OT) helps you to use your remaining vision to complete daily activities safely and independently.

Aim Of Programme

To provide occupational therapy rehabilitation services to enable people with low vision to live productive and independent lives.

Who Will This Service Benefit?

Adults with low vision who have problems with daily activities and wish to continue doing these activities.

This Includes Adults With Low Vision From:

- Macular degeneration
- Glaucoma
- Diabetic retinopathy
- Stroke
- Brain injury

What Does The OT Do?

An OT will assess how your daily activities are affected by low vision, discuss the goals with you and work out a treatment plan.
