

BENIGN PROSTATIC HYPERPLASIA

Experiencing **bothersome urinary** tract symptoms?

An **enlarged prostate** can lead to lower urinary tract symptoms.

If untreated, it can cause bladder, urinary tract or kidney problems.

COMMON SYMPTOMS

- Frequent or urgent need to urinate
- Difficulty starting urination
- Weak urine stream or a stream that stops and starts
- Dribbling at the end of urination
- Incomplete emptying of the bladder

CAUSE

The prostate gland grows throughout a man's life. This continued growth might enlarge the prostate large enough to cause urinary symptoms or to significantly block urine flow.

DIAGNOSIS

- Abdominal exam
- Digital rectal exam
- Urine test
- Blood test for Prostate Specific Antigen (PSA)

Speak to your doctor today to get support for benign prostatic hyperplasia.
