

Vildagliptin

Medication Information Leaflet

What is this medication for?

Vildagliptin is used in the treatment of diabetes by helping to increase the insulin release after a meal and decrease the amount of sugar made by the liver. It works together with lifestyle changes, such as having a healthy diet and regular exercise, to reduce blood sugar levels.

How should I take/use this medication?

This medication can be taken once or twice a day. You may take this medication before food or after food.

What should I do if I forget to take/use this medication?

If you missed a dose, take the missed dose as soon as you remember. If it is almost time for your next dose, take only the usual dose.

Do not double your dose or use extra medication to make up for the missed dose.

What precautions should I take?

Inform your healthcare professional if you:

- Are allergic to this medication or any of the other ingredients of this medication
- Are pregnant, planning to become pregnant or breastfeeding
- Have pancreas problems such as pancreatitis (inflammation of the pancreas)
- Have gallstones, drink alcohol very often or have very high levels of triglycerides (a type of cholesterol) in your blood. These medical conditions can increase your chances of getting pancreatitis.
- Have kidney or liver problems

If you need to do fasting blood tests, do not take your medication until your blood has been taken and you have eaten.

What are some common side effects of this medication?

Like all medications, this medication may cause some possible side effects but not everyone experiences them. Consult your healthcare professional if any of the side effects becomes severe and bothersome.

The common side effects of Vildagliptin include:

- Headache
- Dizziness
- Fatigue
- Myalgia (muscle pain) and arthralgia (joint pain or stiffness)
- Tremor/shaking

What are some rare but serious side effects that I need to seek medical advice immediately?

The symptoms of a drug allergy include one or more of the following:

- Swollen face/eyes/lips/tongue
- Difficulty in breathing
- Itchy skin rashes over your whole body

If you experience any of these symptoms, you should stop your medication and see your healthcare professional immediately.

If the following serious side effects happen, you should consult your healthcare professional immediately:

- Pancreatitis (inflammation of the pancreas) is a rare but serious side effect of this medication. Symptoms of pancreatitis include:
 - Severe pain in the stomach, abdomen or back area
 - Nausea or vomiting that does not go away
 - Fever
- New onset of blisters or ulcers

What food or medication should I avoid when I take/use this medication?

Avoid taking alcohol with this medication as this can increase your chances of developing pancreatitis.

How should I store this medication?

Store in a cool and dry place, away from direct sunlight. Keep this medication away from children.

How should I throw away this medication safely?

Pack this medication into a black trash bag and seal it tightly before throwing it into the rubbish chute or bin.
